INGROUND LIFTS

Welcome to AUTOPSTENHOJ

AUTOPSTENHOJ - Premium quality workshop equipment

We offer solutions and not only products!

AUTOPSTENHOJ is a workshop solution supplier for the global automotive market standing for a range of innovative processes and top quality products. These are supplied through competent partners as a premium solution ensuring customers the best experience throughout the life time of the product.

Due to the close cooperation with the leading car manufacturers, we are able to offer an extensive range of approved inground and surface-mounted lifts. Planning, consulting, assembly and technical support complete the AUTOPSTENHOJ range of services.

One strong brand for all markets!

Welcome to AUTOPSTENHOJ

AUTOPSTENHOJ Academy

Not only for our sales and service partners, but also for end users!

In our new, modern AUTOPSTENHOJ Academy we train our partners in sales and technology, directly on the products, with the latest technology, under real workshop conditions. You as end user profit thus from AUTOPSTENHOJ certified experts around the AUTOPSTENHOJ product range.

Also end users such as car dealership owners and workshop owners are welcome to get informed about the quality of our products on site. Challenge us and our partners!

„Stokvis Service, the largest service provider in garage equipment in the Netherlands, with more than 40 service technicians, not only installing AUTOPSTENHOJ products, they are also periodically maintained by us. For Stokvis Service as a partner of AUTOPSTENHOJ it is therefore important to keep up with the technical development in order to be able to continue the maintenance and service perfectly. Therefore, it is nice that the possibility exists to be trained in the new training centre in Rheine. In several sessions we were trained and informed about new technologies. Not only theoretically, but also practice-oriented by working on the products themselves that are installed up there. We were welcomed by AUTOPSTENHOJ and it is nice to see how enthusiastic the employees are and how they inform about the products to transfer their knowledge. This allows Stokvis Service to continue to provide good service to the beautiful products of AUTOPSTENHOJ.“

Peter Smit - Manager PMC Lifting Equipment - Stokvis Service

Our Solutions

Many advantages, perfectly combined.

AUTOPSTENHOJ in-ground lifts impress with

- A lasting good look
- The workshop always looks tidy
- No columns disturb the view
- In-ground lifts are easy to drive over
- The room height can be neglected
- Door clearance is always available when working on the vehicle
- In-ground lifts require less space, that means more workstations can be set up in a smaller area

Benefit from more than 70 years of experience in the field of in-ground technology.

More benefits:

- More lifts per workshop for higher revenue
- Perfectly moving space
- Ergonomic workstations
- Satisfied employees
- Large range of accessories
- High planning reliability
- Extremely low maintenance
- Long lifetime
- No break-down losses
- Low energy consumption
- Good Return on Investment

Strong guide bearing

- Construction design in absolute perfection
- Corrosion-free aluminium bearings
- Optimal overall height supports stability
- Permanently attractive appearance

Safe lifting cylinder

- Hard chrome plated sliding surface
- Precisely fitting piston guidance via sliding bands
- Inversed cylinder with protected piston seal
- Environmentally friendly hydraulic fluid in extremely small quantities

Reliable hydraulic power unit

- Liquid cooled drive motor
- No leakage due to aluminium distributor head
- Constant lifting and lowering times
- Low power consumption
- With pneumatic emergency drain and additional oil filter as standard

Optimal connection

- Devised synchronization device with flexible bearing
- Smooth and perfectly synchronized lifting and lowering
- Mechanical safety device in case of one-side pressure loss
- Completely maintenance- and wear-free

Liquid-tight installation cassettes

- Delivery with tightness certificate
- Wide range of designs for special installation situations

Strong, reliable and durable

Our solution: repair platforms

We develop and produce inground lifts in Germany for intensive and long-lasting use in your workshop. We are the only manufacturer who supplies repair platforms made in full material and completely zinc coated and painted. Why? Take a look at our lifts when they have been in use for 10 or 15 years - or even longer - and you will understand. The lifts do not only look good, they are still fully operational.

The lifting heads which are mounted on the flat supports can be easily and comfortably adjusted lengthwise with one hand. As standard, the lifting heads are coated with high quality rubber. Our rubber blocks are formfit and therefore non-skid connected with the lifting heads. If you choose our XY-heads, you will benefit from the additional, variably adjustable positioning in cross direction and get even greater flexibility. You profit from the best lifting area on the market.

The lifting heads have such a flat design that they can easily be passed over. Due to the low height of max. 70 mm, the lift is very suitable even for very low cars. One thing for sure: our lifts are absolutely reliable, even under full load.

Beautiful and solid

Our technology above the ground

Our solution: swivel arms

Our swivel arms are the top athletes on the market. Slim, but strong and with great endurance.

The biggest challenge with modern vehicles was and still is to reach the correct lifting points in order to lift the vehicle safely and without damaging the underbody. Our range of swivel arms includes double or triple telescopic swivel arms, even additional crosswise adjustable swivel arms are possible.

Low minimum height from 70 mm, in combination with a secure, internal arm locking system, ensure an optimal balance in terms of flexibility and safety for vehicles up to 6.5 t. Smooth work on e-cars is also possible.

With our extensive range of lifting adapters we have a solution for almost every vehicle. Even wheel supports are optionally available! So you don't even have to get under the vehicle, you lift it at the wheels.

Double telescopic swivel arms: Saa

- Protected internal arm locking system
- Due to the low minimum height from 70 mm on, a perfect lifting for sports cars is possible, too
- Extremely slim design with low overall height of the swivel arm bearing
- Lifting capacity up to 5.5 t
- Lifting pads for all vehicles available

Double telescopic and crosswise adjustable swivel arms: Saav

- Protected internal arm locking system
- Low minimum height possible from 70 mm on
- Lifting capacity up to 5.5 t
- Lifting pads for all vehicles available

Triple telescopic swivel arms: Saaa

- Various piston distances up to 2,650 mm
- Easy handling of the swivel arms
- Lifting capacity up to 6.5 t
- Lifting pads for all vehicles available

Our solution: platforms

Our market knowledge, combined with the decades of experience of our professional production and development teams, have led to a range of platforms that are not only characterized by their slim and strong construction, but also by its unique surface treatment. Of course, the platform is at first completely sand blasted and afterwards no less than 4 protective layers are applied. All this together adds up to a platform that is extremely resistant to the influences of everyday use. The platforms are equipped with a non-skid coating as standard. Zink coated platforms are possible on request. Of course we hereby also meet the requirements of the leading car manufacturers.

Whether superstructure on floor, recessed in the floor or even with a hydraulic flush-floor device, there is a variety of versions available so that we can always offer the optimal solution for your workshop. Wheel-free device is also possible: depending on your wishes, with an optional, movable scissor jack or with a wheel-free device integrated in the platform. With our Combi version, you even have two lifts in one.

Well-designed and precise

Our centre-ram lifts

Centre-ram-lifts Sololift (3.5 t)

Only one and yet so flexible.

Our Sololift offers full access around the vehicle. Perfect, if you have little space and the amount of work underneath the car is rather small. The reliable construction with the large cylinder diameter guarantees stable lifting and lowering, even if the weight distribution is not quite optimal.

The pump unit can be positioned in the floor or at the wall. The selection of the different superstructures in combination with the design makes the Sololift particularly suitable for the use in washing bays or in the body repair.

Superstructures:

- Repair platforms
- Swivel arms
- Wheel support
- Galvanized superstructures available

Twin-ram lifts

Masterlift (3.5 t)

Profilift (4.0 t)

Biglift (up to 6.5 t)

The classic in the range of inground lifts is certainly the twin-ram lift. AUTOPSTENHOJ has set the benchmark in the industry for decades. Not only the depth and width of the portfolio, but also the manufacturing quality and the design are unique in the industry.

Many variants are available for all applications in the workshop. We offer a product range with lifting capacities up to 6.5 t. We guarantee constant lifting and lowering by the synchronisation device, which is invisibly installed in the cassette. An alarm signal ensures during the lowering that even in terms of work safety no questions remain unanswered. Of course, our lifts fulfil all legal standards and requirements.

We also have several product recommendations from the leading car manufacturers in this segment due to our decades of experience and also the long, trust-based cooperation with them.

Superstructures:

- Repair platforms
- Swivel arms
- Platforms
- Platforms with wheel-free device
- Combi-version: platform lift plus repair platform or swivel arms
- Check-in-version, especially developed for the reception area

Market leader with more than 70 years of experience

Our 4-ram lifts

www.autopstenhoj.com

4-ram lifts Wheel alignment lifts (up to 6.5 t)

Our 4-ram lifts have been especially developed as wheel alignment lifts and set standards in the industry.

They are available with 5.5 or 6.5 t lifting capacity and can be used flexibly for a wide range of applications and vehicle types.

The smooth running and precision of the sliding plates meet the requirements of the leading car manufactureres. For long-term precision the surfaces are zink coated and painted as standard. The distance pieces have different widths, are easy to move and are also fixed directly once they are positioned. Therefore you can position the sliding plates for almost all wheel bases easily and quickly at the desired distance.

All our platforms can also be used as a work base for headlight tester as an optional extra.

Platform for wheel alignment:

- Precision according to the requirements of the leading car manufactureres (precision tolerance of ± 0.5 mm)
- Secured compensation plates in various widths, for the entire functional surfaces

The perfect wheel alignment lift, also for vehicles with the most modern chassis.

Also suitable for a work base for headlight tester as standard.

Strong and very precise

Enter the digital world of AUTOPSTENHOJ #EXPERIENCE

With a VR model from AUTOPSTENHOJ #EXPERIENCE you can offer the full experience of a walk through your car dealership / workshop. All our VR models can be viewed with VR glasses as well as on a smartphone, tablet or PC/ Mac.

What is included in the VR-Recording?

In addition to the VR model, you also get still images, 360 ° views, introductory videos and a GIF - in other words, you get everything you need for the marketing on your website, social media etc... We also offer to publish your VR model on Google Maps, increasing the reach bei thousands of views.

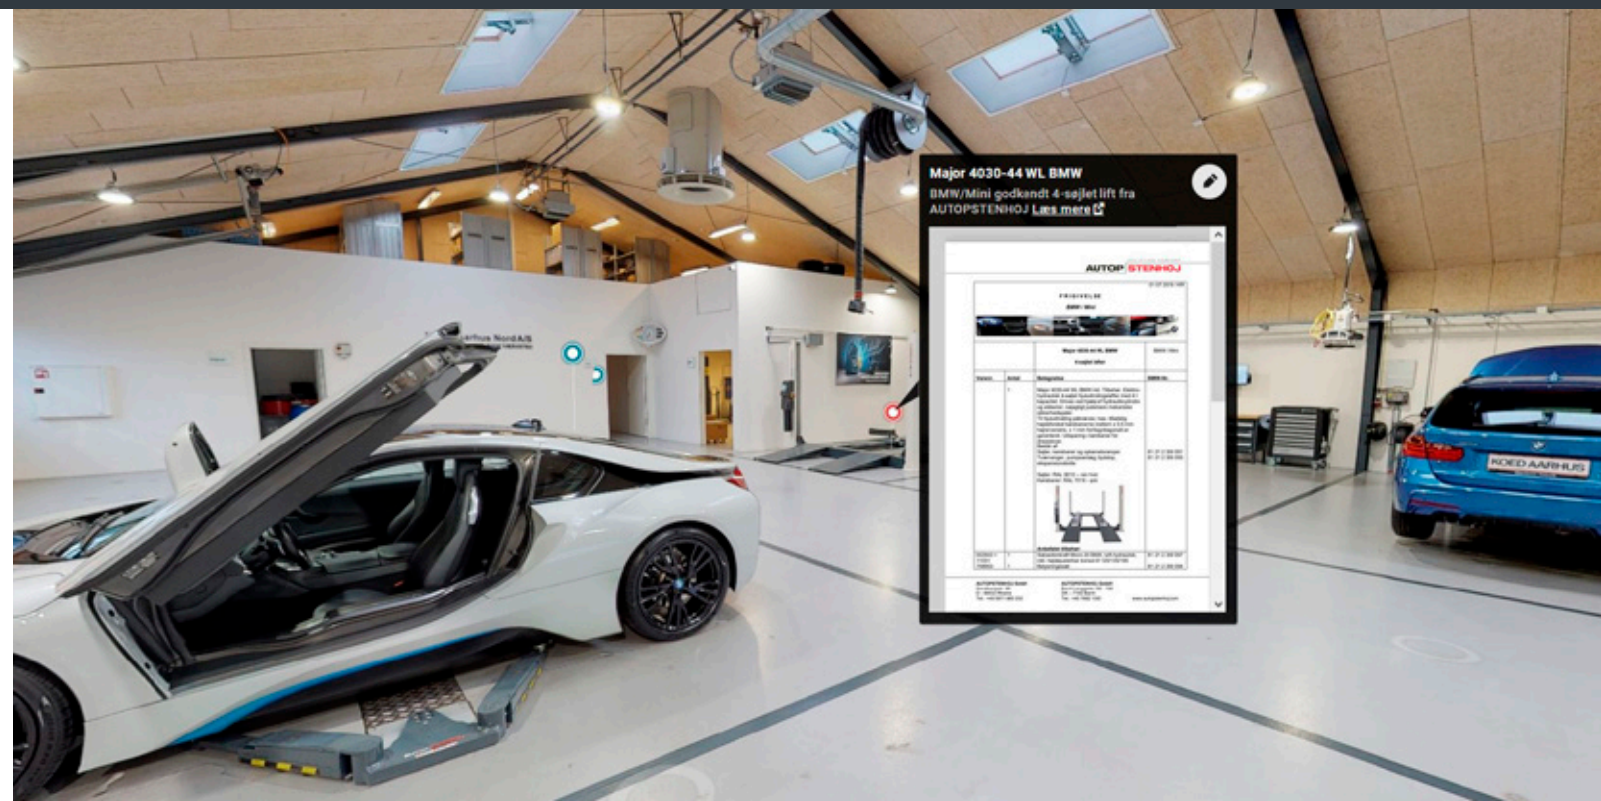

Creation in real time

Once we start the recording, your VR model will be created in real time - that means we enable you to carry out a quality control on site and we prepare the best possible model for you.

No location is too big or too small.

Book your time for recording via: upliftingexperiences@autopstenhoj.com

We do the recording for you at a convenient time in just 2-6 hours depending on the size of your business. You receive your finished model including info points, extra material and publication on Google Maps within one week.
